

FOR IMMEDIATE RELEASE

I-nnovate Announces KwikTag[®] Connector for Elite[®] Enterprise

Embedded Paper Capture Process Joins The Leading Digital Imaging Solution with Thomson Elite's Premier Financial and Practice Management System

Dallas, TX – January 31, 2007. I-nnovate is pleased to announce the general release of its KwikTag[®] Connector for Elite[®] Enterprise, providing seamless integration of ImageTag Inc.'s best-of-class digital imaging and filing system with Elite's leading financial and practice management system for the legal and professional services markets. With the KwikTag Connector for CMS.Net announced in 2005, this new solution for Elite solidifies I-nnovate as the premier solution provider of paper capture and automation for law firm billing and accounting systems.

KwikTag provides Elite Enterprise customers with breakthrough simplicity for the digital capture, filing and retrieval of paper documents, combining unmatched ease, auditability and automated processing speed to meet the voluminous paper management demands of the entire organization.

KwikTag's simple process to capture paper documents does not disrupt staff working patterns or paper flows, making it easy for every office worker to profile, scan and retrieve documents. Not only can paper-based documents be captured with KwikTag, users can also capture electronic documents like word processing documents, spreadsheets or emails.

KwikTag leverages existing office equipment including copiers, scanners, multi-function printers and fax machines.

I-nnovate has seamlessly embedded KwikTag functionality into the following Elite Enterprise areas for paper-intensive document intake and/or retrievals:

- Accounts Payable
- Check Print
- Manual Checks
- Billing
- Accounts Receivable
- Write Offs
- Journal Entries
- Client Disbursements
- Collections
- Inquiries

Additionally, I-nnovate has included a custom Image Station to allow general Firm-related documents to be digitally filed and retrieved with ease.

KwikTag moves paper into digital repositories quickly and easily requiring three easy steps:

1. Profile – the document automatically from Elite Enterprise applications
2. Tag – the document with a Post-it[®] eFlag
3. Scan – the document when convenient

With KwikTag's embedded integration into Elite Enterprise client applications, profiling and tagging documents occur as a normal part of the user's data posting activities, including the automated capture of Client and Matter specific metadata. This makes the KwikTag document capture process nearly effortless for users. With KwikTag's patented process, stacks of profiled and tagged documents can be batch scanned at any time. KwikTag will even send an email reminder if a user forgets to scan a document.

KwikTag provides additional connectors for scanning paper into leading document management systems from Interwoven, Open Text Livelink ECM - eDocs[™] (formerly Hummingbird DM), Open Text Livelink ECM - DOCS Open (formerly Hummingbird DOCS Open) and Accutrac.

"This best-of-class paper-to-digital solution is a must for firms with a focus on firm-wide automation gains" said Jeannette Russell, President of I-nnovate. "Our extensive automation expertise has allowed us to provide seamless integration into the best paper capture application available."

I-nnovate's KwikTag Connector for embedded Elite Enterprise functionality is built with intuitive Microsoft[®] Visual Basic for Applications (VBA) scripting, in addition to C#.NET executable code.
